Routine Inspection by User

Make sure you check your shutters regularly for signs of wear and tear or damage and get these problems fixed by an engineer before a small problem becomes a huge one. Look after your shutters and make sure they are opening and closing properly, there are no obstructions which could cause damage and look out for anything that isn't quite right.

It is important you keep your roller shutter clean and clear of obstructions. If you are going to clean your shutter please turn it off at the mains and wipe the laths and sensors, please do not alter the effectiveness of the sensors. It is not advised that you touch the automation/electronics of the roller shutter.

Annual Inspection, service and maintenance

The annual inspection, service and maintenance of the Roller shutter must be carried out by a competent engineer. It is recommended that an industrial door service to be conducted at least once a year to comply with Health and Safety regulations.
